U/109/24AT00301

Paper III — ENGLISH

Time : Three hours

Maximum : 100 marks

SECTION A — ($10 \times 2 = 20$ marks)

Answer ALL the questions.

1. Correct the errors and rewrite the sentences.
 - (a) I have seen a good film yesterday.
 - (b) Since he came, we are happy.
2. Correct the errors and rewrite the sentences.
 - (a) If he will ask me, I will stay.
 - (b) Did you went to school yesterday?
3. Correct the errors and rewrite the sentences.
 - (a) Do your work without to speak.
 - (b) Look to this beautiful picture.
4. Complete the sentence by choosing the right conjunction.
 - (a) He does not know _____ (who, where, while) Gandhi was born.
 - (b) He is greedy _____ (as well as, but, yet) dishonest.

5. Put in the Correct Tense (simple past or past progressive)
- (a) When I went home, my mother _____
(cook)
 - (b) When the police _____ (arrive), the thief
had left the place.
6. Change the Structure (Active/Passive)
- (a) I was not invited by her. (Change into
Active)
 - (b) The farmer is ploughing the field. (Change
into Passive)
7. Give the synonyms of:
- (a) mandatory
 - (b) brutality
8. Give one-word substitute:
- (a) writing of one's life story.
 - (b) one who turns thoughts inwards.
9. Use the word *surprised* in a meaningful sentence.

10. Match the following words with their meanings.

S.No.	Words	Meaning
1.	Validation	a chain reaction that occurs when one event sets off a series of similar, related. or connected events
2.	Eschew	to free or release (from a charge of crime)
3.	Acquitted	to abstain or keep away from
4.	Domino effect	the act of confirming something as true or correct

SECTION B — ($5 \times 7 = 35$ marks)

Answer ALL the questions in about 150 words.

11. Read the following passage and answer the questions given.

Scientists say there as many stars in the sky as there are grains of sand on a beach because there are numerous galaxies in the universe. A galaxy is a group of stars, planets and other objects in space. Each star spins around a center of high gravity in the same way planets may spin around

the Sun in a solar system. Galaxies are huge. They can contain trillions of stars, that is a number with twelve zeroes (1,000,000,000,000). Before the 1900s, scientists and astronomers, people who study space, used to believe that all the stars of the universe were part of one giant group. In 1917, however, Thomas Wright suggested there were many different groups of stars and later on other astronomers proved his theory. The idea of different galaxies was born. Even though galaxies are huge and expansive, there is also a lot of empty space between the different galaxies. Believe it or not, scientists estimate that there are over 100 billion galaxies (100,000,000,000) in the universe, and if most of them contain a trillion stars, it is easy to see now why there may be more stars than grains of sand on a beach. They believe there may be clusters of galaxies separated by space as well.

Galaxies are classified based on their shapes. There are four main shapes of galaxies in the universe. A spiral galaxy appears to have long arms that spiral around the its center. The older stars are towards the center, and the newer developing stars are part of the 'arms' of the galaxy. This is where the Earth's solar system is located it its galaxy. The second type of galaxy is called barred spiral. It is similar to the spiral but there is a long bar shape in the middle with spirals coming off the ends. The third type is the elliptical which is a large mass of stars all clumped together in the shape of an elliptical disk. It could he compared somewhat to an oval shape squeezed together on the ends.

The final type is an irregular galaxy. These types do not fit into a particular pattern or shape and are usually formed when two other types of galaxies collide with one another. The collision causes the galaxies to lose their elliptical or bar shape and instead, they become irregular. All of this movement and colliding, of course. takes place over millions or billions of years. Astronomers know the most about the Milky Way Galaxy since it is the galaxy containing the Earth and its Solar System along with the seven other planets. and of course Pluto. The Milky Way is part of a cluster group of about 3,000 other galaxies. It is a spiral-shaped galaxy made up of more than 300 billion (300,000,000,000) stars. The Sun is one star that is located in the Milky Way galaxy. The word galaxy actually comes from a Greek word which means *milky*.

Andromeda is the name of the closest galaxy to the Earth and the Milky Way galaxy. It is located 2.6 million light years away from the Earth, which means it would take a beam of light about that long to reach the Andromeda. One end of most galaxies to its other end is about 100.000 light years across.

In summary, the Earth belongs to the Milky Way galaxy which is also like most galaxies. containing a lot of empty space. There are four different types of galaxies, each with their own characteristics. Finally, like many science fiction movies state, most stars are in galaxies far, far away, and it would take millions and millions of years to travel to the billions of galaxies in the universe.

- (a) Which of the following is the term given for people who study space?
 - (i) Astronomers
 - (ii) Astrologers
 - (iii) Astrophysics
 - (iv) Astronomical

- (b) Which of the following numbers is an estimate of the number of galaxies in the universe?
- (i) 100,000,000
 - (ii) 100,000,000,000
 - (iii) 100,000,000,000,000
 - (iv) 100,000
- (c) Which of the following galaxy types is the Milky Way Galaxy?
- (i) Barred
 - (ii) Elliptical
 - (iii) Irregular
 - (iv) Spiral
- (d) Which of the following galaxy types include older stars in the center and newer stars on the outside?
- (i) Irregular
 - (ii) Elliptical
 - (iii) Spiral
 - (iv) Barred

- (e) Which of the following galaxy types may form when two galaxies collide with each other?
 - (i) Elliptical
 - (ii) Irregular
 - (iii) Barred
 - (iv) Spiral
 - (f) Which of the following is the closest galaxy to the Earth?
 - (i) Andromeda
 - (ii) Astronomer
 - (iii) Elliptical
 - (iv) Wright Galaxy
 - (g) What is a galaxy?
 - (i) Group of stars
 - (ii) Group of planets
 - (iii) Group of planets, stars and other objects
 - (iv) Group of moons
12. Write a paragraph on the use of internet in education.
13. (a) Explain the working conditions of the black people in the plantations in the southern states of America, with reference to the poem “Woman Work”.

Or

- (b) What is the theme of the short story “The Survivor”?

14. (a) Explain how the internet changes Mannal's perspective of life.

Or

- (b) Why did protestors begin a campaign called 'defund the police'?

15. (a) Explain how Kylie Jenner launched her cosmetic products.

Or

- (b) What is shadow profile?

SECTION C — ($3 \times 15 = 45$ marks)

Answer the following in about 250 words.

16. Read the following passage and answer the questions.

Hyderabad — The City of Nizams GOLCONDA

In the 16th century, when Golconda was the capital of Qutb Shahi Kingdom, it is believed that a shepherd boy came across an idol on the hill. It was then that the Kakatiya dynasty's ruler built the fort, which is 120 m high. After it was captured by Aurangzeb, the Mughal emperor, the fort fell into ruins.

The beautiful ruins of the fort have a story to tell. They make you wonder how the fort may have looked in its days of glory and grandeur. The fort also organises a sound and light show every day and the history of this fort is narrated in such an interesting manner that even a child can understand and enjoy it. The climb to the fort is a difficult one and unless you are physically fit, you should avoid the climb and relax in the gardens below. The view from the top is breath-taking.

The next place is Charminar. The literal meaning of the monument is 'four minarets'. There is a mosque on the second floor. It is said that when the state was hit by severe plague, Sultan Muhammad Quli Qutb Shah, the fifth ruler of the Qutb Shahi dynasty, prayed to end the plague and promised to build a mosque in the very place where he was praying. Thus, Charminar came into being!

The walk from the bottom to the top of the monument is a little frightening, owing to the narrowness of the pathway and the steepness of the steps. Once you reach the top, the view of the crowds moving below will surely lift your spirits. Make sure you visit the nearby Laad Bazaar, where there are rows of shops selling the famous Hyderabad glass bangles and lac bangles.

The Salar Jung Museum is the third largest museum in the country and boasts of owning the biggest one-man collection of antiques in the world. A visit to the Salar Jung Museum is a must even if you are not a fan of antique stuff. You can view the Nizam's collection of textiles, arms, metalware, ivory carvings. Indian bronzes and carpets.

The main attraction is definitely the Musical Clock, made by Cook and Kelvy of England. Inside the clock is a timekeeper. Every hour, he comes out and beats a gong as many times as the time indicates. Another attraction of the museum is the Veiled Rebecca, an amazing sculpture made by the Italian sculptor, Giovanni Maria Benzoni.

- (a) What led to the construction of the Golconda Fort? (3)
- (b) How is the history of the Golconda Fort recounted every day? (3)
- (c) Why did Quli Quth Shah build a mosque? (3)
- (d) How does one feel after reaching the top of Charminar? (3)
- (e) Name the two attractions of the Salar Jung Museum. (3)

17. (a) Write a descriptive paragraph about the movie you watched recently. (10)
- (b) Compose tweets on the following topics. (5)
- (i) The person whom you regard as an inspiration.
- (ii) Any recent political event
18. (a) Analyse the significance of the title “The Survivor”.

Or

- (b) Nzulezo, according to the authors is a ‘perfect symbiosis of people and the earth’. Discuss.
-
