Paper III – ENGLISH

Time : Three hours

Maximum : 100 marks

SECTION A — ($10 \times 2 = 20$ marks)

Answer ALL the questions.

1. Correct the errors and rewrite the sentences.
 - (a) Each one of the girls are responsible.
 - (b) If you had come to me, I would help you.
2. Correct the errors and rewrite the sentences.
 - (a) He bought some stationeries.
 - (b) He commanded that shoot at once.
3. Correct the errors and rewrite the sentences.
 - (a) This is an universal truth.
 - (b) Raghu is senior than Raju.

4. Complete the sentence by choosing the right conjunction.
- (a) Vishal was absent _____ (so, while, because) he was ill.
 - (b) I don't know _____ (hardly, whether, soon) he comes or not.
5. Put in the Correct Tense (simple past or past progressive)
- (a) When my friend came I _____ (study).
 - (b) When the bell rang, she _____ (open) the door.
6. Change the Structure (Active/Passive)
- (a) The Ramayana was written by Valmiki.
(Change into Active)
 - (b) Someone has stolen my purse (Change into Passive)
7. Give the synonyms of:
- (a) monarchy
 - (b) solidarity
8. Give one-word substitute:
- (a) to be very frightened
 - (b) the quality or feeling of being grateful or thankful

9. Use the word *patriotism* in a meaningful sentence.

10. Match the following words with their meanings.

S.No.	Words	Meaning	
(a)	peninsula	(i)	a winter sport typically carried out in a prone or seated position on a vehicle generically known as a sled
(b)	sledging	(ii)	extremely difficult to defeat, overcome, manage, etc.
(c)	radicalization	(iii)	a long, narrow sandbank, especially at the mouth of a river
(d)	formidable	(iv)	the act or process of becoming more extreme, as in beliefs, actions, or politics

SECTION B — ($5 \times 7 = 35$ marks)

Answer ALL the questions in about 150 words.

11. Read the following passage and answer the questions given.

An ecosystem is all living things and non-living things and how they interact with each other. Ecology is the study of how all these things interact with each other in order to survive. An ecosystem may be very small like a backyard or a

pond. Or it can be large like a prairie, a desert, or a rain forest. There are freshwater ecosystems that cover less space than saltwater ecosystems. Regardless of where they are located or how small or large they may be: all ecosystems are made up of the same parts. These parts are either living or non-living parts and are equally important to the ecosystem. The non-living parts of the ecosystem are called abiotic factors. All living things need non-living things in order to survive. Some of these abiotic factors include water, minerals, sunlight, air, climate and soil.

All living things need water to survive. Living organisms are made up of between 50 and 95 percent water. The processes that keep living things alive like photosynthesis and respiration can only take place in the presence of water. Living things also need minerals such as calcium, iron, phosphorus and nitrogen. Some living things need sunlight to make food. Animals need oxygen to produce energy for their bodies. The environment must also have the right temperature for organisms to survive. Without these non-living things, life would cease to exist. Abiotic factors are essential to the ecosystem. Just like abiotic factors make it possible for organisms in an ecosystem to survive; biotic factors are equally important for survival in the ecosystem. Biotic factors or living parts of the ecosystem include animals, plants, fungi, protists and bacteria.

Plants and algae are called producers. They produce oxygen and food that animals need. Animals are called consumers. They consume or eat the plants and other animals. Animals also give off carbon dioxide that plants need to make food. Thus the ecosystem is a continuous cycle of living and non-living things interacting with each other to survive. What do fungi and bacteria contribute to the ecosystem? They are very important because they are called decomposers. They decompose, or break down, dead plants and animals and turn them into useful things like minerals that enrich the soil. Plants need this to grow. Each of these kinds of organisms helps the other to survive in the ecosystem. Each kind of organism whether it is an animal, plant, fungus, or bacteria is a member of a different species. All the organisms of a species living in the same area make up a population. And all populations living in certain areas make up a community.

Scientists study the interactions of different populations in an ecosystem's community. This helps them to determine how an ecosystem stays healthy and continues to grow. It further describes how living and non-living organisms work together to provide survival for each other. Whether large or small, whether abiotic or biotic, the ecosystem depends on the interaction of each in order to remain healthy.

- (a) An ecosystem is best described by which of the following? (1)
- (i) All living things and non-living things and how they interact with each other.
 - (ii) How living things survive and remain healthy.
 - (iii) All living things and non-living things and how they survive independently.
 - (iv) When the sunlight gives life to the non-living things.
- (b) The non-living parts of the ecosystem are called which of the following? (1)
- (i) Biotic factors
 - (ii) Environmental factors
 - (iii) Abiotic factors
 - (iv) Climate factors
- (c) The living parts of an ecosystem are called which of the following? (1)
- (i) Abiotic factors
 - (ii) Environmental factors
 - (iii) Climate factors
 - (iv) Biotic factors

- (d) Each kind of organism whether it is an animal, plant, fungus, or bacteria is a member of a different. (1)
- (i) Family
 - (ii) Species
 - (iii) Culture
 - (iv) Factor
- (e) All the organisms of a species living in the same area make up which of the following? (1)
- (i) An ecosystem
 - (ii) A producer
 - (iii) A population
 - (iv) A consumer
- (f) Fungi and bacteria contribute which of the following to the ecosystem? (1)
- (i) They decompose dead plants and animals and turn them into useful things.
 - (ii) They consume dead plants and survive in the community.
 - (iii) They provide oxygen to other plants and animals in the ecosystem.
 - (iv) They give off carbon dioxide to plants so they can make food.

- (g) What is your understanding of the eco system? (1)
12. Write a paragraph on the merits and demerits of Artificial Intelligence. (7)
13. (a) Explain the concerns raised by Maya Angelou in the poem, “Woman Work”. (7)

Or

- (b) Outline the major themes as seen in the story “The Survivor”. (7)
14. (a) Discuss the childhood of Manal al-Shariff. (7)

Or

- (b) Describe the tragic and unfair circumstances that led to the death of George Zimmerman and Michael Brown. (7)
15. (a) Narrate your own experiences of using Instagram. (7)

Or

- (b) What is your preferred social media platform and how do you use it? (7)

SECTION C — ($3 \times 15 = 45$ marks)

Answer the following in about 250 words.

16. Read the following passage and answer the questions.

The state of West Bengal, in the Eastern region of India, is home to a rich and bewildering variety of forests and wildlife. From the famous Royal Bengal Tiger that stalks its prey with legendary cunningness in the Gangetic delta of famous Sundarbans, to the Great Indian One-horned Rhinoceros grazing in the Terai / Dooars grassland, the leopards lurking in the foothills of the Himalayas and Red Panda resting in bamboo groves of Himalayas. The forests of this state has a rich assemblage of diverse habitats and vegetation designated with the help of eight different forest types. The diverse fauna and flora of West Bengal possess the combined characteristics of the Himalayan, sub-Himalayan and Gangetic plain.

Diversity is further reflected in different types of ecosystems available here like mountain ecosystem of the north, forest ecosystem extending over the major part of the state, freshwater ecosystem, semiarid ecosystem in the western part, mangrove ecosystem in the south and coastal marine ecosystem along the shoreline.

These diverse ecosystems have resulted in rich faunal diversity of the state and consists of 10,013 species out of a total of 89,451 species of animals present in our country, thus representing 11.19% of our country's fauna.

West Bengal has 4692 sq.km. of forests under Protected Area (PA) network which is 39.50% of the State's recorded forest area With the Pakhi Bitan WLS Jalpaiguri District having an area of 14.09 sq.km, the latest notified WLS in the state, the total area under Protected Area has gone upto 4705.9362 sq.km (39.62% of Recorded Forest Area). The PA network includes 1502.8146 sq.km. in Sixteen Wild Life Sanctuaries, 1981.4817 sq.km. in six National Parks and the balance areas are being represented by buffer areas of the two Tiger Reserves, viz. Sundarbans Tiger Reserve and Buxa Tiger Reserve. There are two Elephant Reserves viz., Mayurjharna Elephant Reserve with an area of 414.00 Sq.km. and Eastern Dooars Elephant Reserve with an area of 977.51 Sq.km. In addition, there is one Biosphere Reserve viz. Sundarban Biosphere Reserve with an area of 9630 Sq.km. This includes the Sundarban Tiger Reserve, Lothian Island Wildlife Sanctuary, West Sundarban Wildlife Sanctuary and the Haliday Island Wildlife Sanctuary. In West Bengal emphasis has been given to

conservation and management of sustainable resources in order to achieve the goal of long-term biodiversity conservation. The overall strategy involves protection of critical habitats of endangered species.

The Bengal wilderness is also home of an array of highly endangered species like the Asian Elephant, Great one horned Rhino, Gaur, Serow, Red Panda, Black Necked Crane, Great pied Hornbill, Goliath Heron, Estuarine Crocodile, Salvator Lizards, Olive Ridley Marine Turtle, rare Batagur terrapin, let alone being the habitat for most of the cats of India, e.g. Royal Bengal Tiger, Leopard, Clouded Leopard and Marbled Cat, Leopard Cat, Golden Cat, Jungle Cat and Fishing Cat representing the lesser cats.

- (a) Why is the diversity of ecosystems important for the faunal diversity of West Bengal? (2)
- (b) Which ecosystem is NOT mentioned as part of the diverse ecosystems in West Bengal?(2)
- (c) Which is the latest notified Wildlife Sanctuary in West Bengal? (2)
- (d) Evaluate the role of the Sundarban Biosphere Reserve in the conservation strategy of West Bengal. (2)

- (e) Discuss the significance of the different cat species found in West Bengal's forests, such as the Royal Bengal Tiger, Leopard and Clouded Leopard. (2)
- (f) Name any five endangered species in West Bengal. (5)
- 17. (a) Write a descriptive paragraph about the tourist place you visited recently. (10)
- (b) Compose tweets on the following topics. (5)
 - (i) Celebration of College Day
 - (ii) Any recent musical event
- 18. (a) Analyse the character of Manal al-Shariff as the pioneer of women's rights in Saudi Arabia? (15)

Or

- (b) Critically evaluate the title of the text "The Ultimate Influencer". (15)
-
